

AI-Powered Hospital Readmission Prevention Program

Change Management, Training & Clinical Adoption Plan Version 1.0
Healthcare AI Implementation Portfolio Project

6.1 Purpose of Change Management

The purpose of this plan is to ensure successful adoption of the AI solution by healthcare professionals. The focus is on preparing users, addressing concerns, redesigning workflows, and creating long-term acceptance of the technology.

6.2 Change Management Strategy

The project will use a structured approach to guide adoption:

- Engage stakeholders early
- Communicate the purpose and benefits of AI
- Address concerns about trust and job impact
- Provide ongoing education and support
- Collect feedback and improve workflows

6.3 Stakeholder Engagement Plan

Physicians:

Validate clinical usefulness and provide feedback on predictions.

Nurses and Care Managers:

Use AI risk information to guide patient interventions.

Hospital Leadership:

Support resources, accountability, and organizational alignment.

IT Teams:

Support system reliability and technical issues.

6.4 Training Program

Training will include:

- Introduction to AI concepts
- How the readmission prediction model works
- How to interpret AI outputs
- Appropriate clinical responses
- Limitations of AI predictions
- Privacy and security responsibilities

6.5 Clinical Workflow Integration

Workflow example:

AI identifies high-risk patient -> Care team reviews prediction -> Clinician evaluates patient -> Appropriate intervention is provided -> Outcome is monitored.

The AI system supports clinical decisions and does not replace professional judgment.

6.6 Addressing Resistance and Trust

Common concerns may include:

- Fear of replacing clinicians
- Lack of understanding of AI decisions
- Concerns about accuracy
- Increased workload

Solutions include transparency, education, clinician involvement, and continuous performance reporting.

6.7 Adoption Metrics

Success will be measured through:

- User training completion
- Clinician adoption rates
- User satisfaction surveys
- Alert response rates
- Reduction in unnecessary alerts
- Improvement in patient outcomes

6.8 Continuous Improvement

After implementation, feedback from clinicians and patients will be collected. The organization will review workflows, update training, and improve the AI solution based on performance data and user experience.

Document Outcome

This document provides the strategy needed to successfully integrate an AI solution into clinical practice by focusing on people, processes, communication, and sustainable adoption.
